

TMP CORPORATION
TTY Report – CC Docket No. 94-102
January 15, 2002

The following information is based on representations made to TMP Corporation ("TMP") by its vendors. TMP does not have the ability to independently verify these release dates. TMP is completely reliant upon its vendors to implement the TTY solution in its handsets and network. TMP commenced service in November, 2001.

1. Network infrastructure software development

Tecore, our switch manufacturer and AirNet our infrastructure manufacturer are aware of TTY requirements. Software compliance is under evaluation at this time.

TMP is dependent upon a solution being made available by the infrastructure vendors.

2. Handset development and testing plans

At this point we are working with handset manufacturers to validate a solution for deployment in our network by the 6-30-2002 date set by the FCC. See letter from Alfred Lucas of Motorola to Ed Hall of the Alliance for Telecommunications Industry Solutions dated October 10, 2001 and letter from Chris Wallace of Nokia dated October 10, 2001 submitted in the TTY Forum's October TTY report.

TMP is dependent not only upon a solution being made available by manufacturers of PCS handsets by the 6-30-02 FCC mandated deadline, but also in being able to have the handsets timely delivered from the manufacturers.

3. Beta testing and lab testing

TMP will begin testing TTY compatible equipment dependent upon solutions provided by network infrastructure and handset vendors.

4. Release and general availability to carriers of network infrastructure software

TMP understands that Airnet is developing a software solution and is awaiting updated reports of software availability from switching and infrastructure vendors.

5. Availability to carriers of full acceptance test units

TMP is awaiting software and hardware availability from switching, infrastructure, and handset vendors.

6. Efforts toward achieving digital wireless solution compatibility with enhanced TTY devices

TMP remains dependent upon the availability of vendor provided solutions to meet the FCC's mandated timeline (6-30-02) to provide 911 TTY access to our networks. It has contacted Airnet seeking to obtain the date of availability for its software and hardware but has yet to be informed of such a date or cost of the solution.

TMP expects the GSM functional performance to be similar to the other technologies and meet or exceed all of the TTY Forum's Consumer Group requirements.

7. Carrier coordination of testing with PSAP

See response to number 2. above

8. Carrier testing activities, including field testing, consumer end-to-end testing, and other necessary tests

Testing will begin immediately upon receipt of software and hardware. TMP is dependent upon network infrastructure vendor solutions.

9. Retail availability of necessary consumer equipments

TMP is dependent upon the availability of handsets from vendors. No firm commitment has been received at this time from handset vendors.

10. Geographic scope of network infrastructure deployment

TMP provides service within broadband PCS BTA 367

Respectfully submitted,

Walt Rowland
President
